Master of Training and Development					
5652	M*	2F/4P	160^	Feb/Jul	Bachelor degree

* Internal study on-campus or external study off-campus.

^ Upon successful completion of 40 credit points from relevant courses, you may exit with a Graduate Certificate in Training and Development.

What you'll study

This masters degree will prepare you for professional roles in adult, vocational and community education, training and professional development. You'll develop your existing vocational knowledge and build your capacity for professional work in training, teaching, development and research-related roles.

Career opportunities

You'll be prepared for a career in training and development, including professional education or training and development roles in private and public sector organisations. This may include in your current professional field. The teaching specialisation of this degree will equip you to pursue careers in mainstream adult and vocational education fields, such as the vocational education and training (VET) sector.

Please note that this degree does not lead to teacher registration.

The profound experience of having a family member cope with intellectual impairment inspired Danielle Ward to pursue a **Master of Autism Studies**. She hoped to use her degree to strive for positive outcomes for people with autism spectrum disorders (ASD). Danielle said there was an urgent need for greater knowledge and empathy regarding the social, communication and behavioural challenges facing people with developmental disabilities classed as ASDs. 'With some form of autism diagnosed in one in every hundred people, it's likely every teacher will come into contact with a person affected by an ASD, so to be armed with that level of professional and personal insight is invaluable,' Danielle said.
